

Communication

Date	14 July 2026
Team ID	SWTID-2026-7049
Project Name	Emotion Detection & Learning Support Engine (AI Learning Assistant)
Maximum Marks	1 Mark

Effective communication is essential for a successful project demonstration. This document outlines the communication strategy used within the team and with stakeholders throughout the project lifecycle.

Communication Plan

S.No	Communication Type	Frequency	Channel / Tool	Participants	Purpose
1	Team Standup	Daily	WhatsApp group	Full team	Quick status check, unblock issues the same day
2	Progress Update	Weekly	WhatsApp / in-person	Full team	Review completed epics against the backlog
3	Issue / Bug Discussion	As Needed	WhatsApp	Aditya Sinha + relevant member	Debug blocking issues (e.g. TensorFlow/PyTorch coexistence, OpenRouter call hang)
4	Stakeholder Review	Bi-Weekly	In-person	Full team	Demo progress and gather feedback
5	Final Demo Rehearsal	Once	In-person	Full team	Walk through the demo flow before submission
6	Documentation Handoff	As Needed	Shared repo (markdown docs)	Aditya Sinha → full team	Record engineering decisions/rationale for whoever picks up next work

Communication Challenges & Resolutions

S.No	Challenge Faced	Resolution / Action Taken
1	EPIC5_POLISH_BACKLOG.md was completed locally but never pushed — discovered missing entirely from repo history during Epic 6 validation.	Checked the full git history across all branches to confirm it was genuinely never committed, then committed and re-verified it via a fresh clone (documented in VALIDATION_REPORT.md).
2	OpenRouter integration issues surfaced late in the schedule (several "try" commits fixing timeouts and a version conflict).	Iterated through fixes in quick succession (an httpx version conflict, then an LLM timeout) rather than blocking on one perfect fix, keeping the DISABLE_AI_RESPONSE fallback available the whole time so the app stayed usable.
3	The Hugging Face model repo lookup failed on Streamlit Cloud during deployment, requiring several rounds of debugging.	Iterated through multiple attempts (temporarily exposing the BERT load error for visibility, then adjusting the repo lookup) until the deployment was stable in degraded mode.
